

Q2 Please rank the adaptokc chapters in order of priority to you.

Answered: 35 Skipped: 0

	1	2	3	4	TOTAL	SCORE
Energy Productivity (solar, wind, geothermal, energy efficiency)	22.86% 8	34.29% 12	28.57% 10	14.29% 5	35	2.66
Waste Reduction (recycling, landfills, food waste, composting, materials reuse)	34.29% 12	17.14% 6	17.14% 6	31.43% 11	35	2.54
Natural and Built Environment (urban heat island, water quality, low-impact development, food policy)	22.86% 8	25.71% 9	22.86% 8	28.57% 10	35	2.43
Air Quality (greenhouse gas emissions inventory/reduction, alternative fuel transportation, transportation choice)	20.00% 7	22.86% 8	31.43% 11	25.71% 9	35	2.37

Q3 Please tell us why.

adaptokc priorities survey responses

#	RESPONSES	DATE
1	I think Oklahoma City could really make some improvements around water quality which affects everyone.	5/20/2020 3:11 PM
2	All are important! The natural & built environment is the area where I am personally most active, so that's where I have the most experience and the strongest opinions :) But I am also deeply supportive of energy efficiency goals, increasing solar energy use, waste reduction, low-impact development, etc. Of course, many of these separate priorities will be most successful when done together. BTW, I did not have time to read the entire document, but what I did read was informative and thought-provoking.	5/20/2020 1:53 AM
3	I feel that the Natural and Built Environment section has the most potential to positively impact our community in a timely manner	5/19/2020 12:37 PM
4	We have cheap electricity right now but that won't always be the case. It is a line item on every family's budget so Oklahoma City should work to help control those costs, means more money in people's pockets.	5/15/2020 3:15 PM
5	OKC is getting hotter. Sprawling metropolis provides lots of opportunity for creative design and immediate environmental/global warming reversal strategies.	5/14/2020 12:40 PM
6	I think we need to work on air quality and alternate transportation issues first, then energy alternatives, then waste disposal. That was hard. I want them ALL to be first.	5/14/2020 11:46 AM
7	choices above align with our company's effort to increase sustainability	5/14/2020 10:13 AM
8	This answers are no where close to the four I would have chosen as priority.	5/14/2020 3:14 AM
9	It seems the most personal that citizens can actually have a large role to play.	5/13/2020 9:55 PM
10	Sustainability appears to be the buzzword for the last decade and part of an agenda to convince otherwise sane people to waste money and time on negligible processes.	5/13/2020 9:15 PM
11	We are creating mountains of waste.	5/13/2020 3:46 PM
12	There is always so much trash blowing around OKC. I'd like to see less of that.	5/13/2020 3:28 PM
13	Air quality is a critical issue that is constantly changing and may get worse over time if we do not implement changes now.	5/13/2020 2:15 PM
14	Why what?	5/13/2020 1:36 PM
15	I live in NE OKC in a neighborhood that is almost surrounded by industrial businesses. The air quality is toxic and wearing a mask is necessary to just go outside and sit on the porch, depending on the wind direction. I don't have the freedom or the privilege to do that like those of you reading this. My home is only 10 years old and paid for but I don't have the freedom or privilege of having clean air to breathe in OKC on a daily basis.	5/13/2020 10:38 AM
16	We need more recycling and composting avenues to keep those items out of landfills. There are many things that could be recycled that Oklahoma doesn't accept - I've been around the world and there is very little that other countries have to send to landfills because EVERYTHING is recycled and they use more zero waste products	5/12/2020 7:02 PM
17	Waste reduction is essential in making OKC more sustainable. Adding public recycling bins, recycling for all cities (Nichols Hills included), public composting bins, and reusing materials will send a message to the people of Oklahoma that OKC is leading the way in sustainability. We have to be leaders in our state, and waste reduction is the first step. When these waste reduction opportunities are more widely available to the public, I think we'll be surprised to see how much it improves overall health, mindfulness, and cleanliness. Our city deserves the best, and this is the right step in that direction.	5/12/2020 3:10 PM
18	All areas are so important. Thank you OKC for creating and implementing a sustainability plan. I fully support this.	5/12/2020 1:39 PM
19	OKC residents seem to get the "trash less" concept. Phasing it in with the public getting to have an active part seems important. People want to feel useful right away with stuff and not just watch service prices increase.	5/12/2020 1:04 PM
20	I think in this order they will have the largest impact for the most people	5/12/2020 12:03 PM

adaptokc priorities survey responses

21	I based it on my understanding of most significant contributors to health of humans and of climate. Air quality is impacted heavily by transportation, which is influenced by land use policy. With our lack of density, we have so many quiet roads. A little extra emphasis on biking and walking infrastructure would do wonders for our quality of life and our environmental impact. Waste reduction is important, but not as immediately needed compared to the other elements.	5/12/2020 4:55 AM
22	Urban agriculture has a restorative ability which would address many of the other concerns as well as provide economic opportunity, and healthier lifestyles for the community both directly and indirectly involved.	5/11/2020 8:44 PM
23	I was a member of the Urban Ag Coalition when the City was developing the Urban Ag Ordinance. I'm interested in seeing us create a Food Policy Council to tackle some of the food issues facing us, especially people who have financial and/or transportation problems. Really, though, I'm interested in all these issues, and they are all inter-related.	5/11/2020 5:51 PM
24	I have solar panels on my house. They are fantastic. Oklahoma is a prime state for solar generation on rooftops. Not solar farms, but on rooftops. It takes up no space, benefits the homeowner, and if we encourage it, will benefit all with no added infrastructure, no added land use, and very little cost over time. A win-win for all. Air quality and greenhouse gas emissions are my second most important choice. I hope OKC takes concrete steps to reduce them. And that dovetails in with the residential solar production. OKC has a decent recycling program. I would like to see more reuse of materials. I particularly dislike plastic bags and easily blown plastic and styrofoam. They are a menace to a windy place like OKC and should be banned. The amount of plastic bags you see driving around is staggering. I would also like to see water quality improving in our state, and OKC should be a leader. Solid waste (again, plastic bags, cups, fast food styrofoam) creates ugly, ugly rivers and streams that are nearly impossible to clean once polluted. Just look at some of the areas near Overholser or along the Canadian where the river swirls.	5/6/2020 7:58 PM
25	Air quality is the most prevalent environmental factor, and indirectly corrects the other 3 factors.	5/6/2020 8:29 AM
26	They're all important!	5/1/2020 9:15 PM
27	The diversification of our energy sector will not only make our economy more resilient and robust but will also have a huge impact on pollution mitigation and greenhouse gas emissions. Wind and solar are among the fastest-growing sectors of the global economy and are included as two of the top ways to reduce carbon emissions according to The Drawdown Project. When taken together, increased utility-scale PV and onshore wind fields are THE most effective way to fight climate change. There is no downside to converting to a sustainable energy sector.	4/28/2020 3:22 PM
28	I prioritize zero waste personally, have a background in the Energy Industry but now work at a City owned public golf course pursuing my second career. My passion and current professional mission is to shift cultural norms of golf facilities to an educated awareness and ownership of a best management practices focused on environmental sustainability.	4/28/2020 12:08 PM
29	Oklahoma has enormous potential for solar, yet we rank low in usage. Oil cannot be depended on - we must transition to newer forms of energy production, stop incentivizing fossil fuels, and start incentivizing alternative forms of clean energy. This would address climate change, and would also be a boon to our economy, which is too fossil fuel dependent.	4/26/2020 1:18 PM
30	Health first.	4/24/2020 10:27 PM
31	the low hanging fruit (biggest bang for the buck)is the priority. although all of the chapters are important.	4/24/2020 4:16 PM
32	I think waste reduction might be one of the easiest (in terms of infrastructure and participation) goals so it might be a good place to start. And it can be expanded and changed as we work towards the other goals. I used similar reasoning for putting energy productivity next. Diversifying our energy production is important for moving into the next steps like public transportation and infrastructure and will give more opportunities for those projects. Then the air quality projects because that sounds like re-evaluating and adding to infrastructure that we already have. Finally we will have the most opportunities for natural and built environment projects once we have waste reduction (work in the food policy), diversified energy source, and greener access to the city.	4/24/2020 10:19 AM
33	I ranked waste reduction #1 because I believe OKC and the entire state of OK could increase the productivity and ease of recycling.	4/23/2020 4:38 PM

adaptokc **priorities survey responses**

34	Energy from sources other than gas & oil is priority #1 to me	4/22/2020 12:24 PM
35	Individuals can affect change with appropriate infrastructure. Entities will be responsible for moving on the others.	4/22/2020 9:15 AM

Q4 What changes or additions would you make to adaptokc?

Answered: 35 Skipped: 0

adaptokc priorities survey responses

#	RESPONSES	DATE
1	I would put more focus on Natural and Built environment category.	5/20/2020 3:11 PM
2	I am curious as to what happens with the comments made by the public, and how/if they get incorporated into the plan...?	5/20/2020 1:53 AM
3	I would speed up several of the time frames listed under implementation if possible. I would also plan on creating some show and tell demonstration areas for the public to see and experience that would correlate with with several of the identified tasks and projects.	5/19/2020 12:37 PM
4	Add at least one photo of breakdancing	5/15/2020 3:15 PM
5	This a is a great start, we would love more community involvement. Maybe cash incentives to renters/property owners for implementing green initiatives. i.e electric vehicles, city electricians installing car charging ports in their homes. We would also like to see city streets painted white to reflect UV rays and turned into driveable solar roads. Inventive long term use of space.	5/14/2020 12:40 PM
6	I already drive less. When my job was 1.5 miles away I buled to work, bit now its 25 miles away and that's not possible (there are no good routes that aren't dangerous and take 3 hours to bike one way). I already recycle as much as possible and don't use plastic as much as possible.	5/14/2020 11:46 AM
7	none	5/14/2020 10:13 AM
8	Get rid of the dumb Mayor.	5/14/2020 3:14 AM
9	Looking into bringing urban Food Co-ops into the food deserts in OKC.	5/13/2020 9:55 PM
10	What a waste of money and resources! The whole thing looks like a leftist con to make us all poorer. I am disappointed with our city leaders. I mean sheep!	5/13/2020 9:15 PM
11	None	5/13/2020 3:46 PM
12	I have no opinion	5/13/2020 3:28 PM
13	In terms of air quality, I would also encourage regenerative agriculture. The benefits include but not limited to: reduced greenhouse emissions, stronger nutrient quality in soil, and increased biodiversity.	5/13/2020 2:15 PM
14	Car based infrastructure is always going to be king and has to be part of the discussion going forward which includes capacity expansion. Nuclear energy also needs to be part of the discussion for large scale energy production.	5/13/2020 1:36 PM
15	More time, energy, care, concern, action for those who can't breathe clean air in OKC.	5/13/2020 10:38 AM
16	Compost collection with trash and recycling	5/12/2020 7:02 PM
17	N/A	5/12/2020 3:10 PM
18	None so far - a great start! Thank you OKC!	5/12/2020 1:39 PM
19	None	5/12/2020 1:04 PM
20	Not sure	5/12/2020 12:03 PM
21	Be aggressive with timelines and goals. I've seen too many guides and plans that may start to get followed a decade later. Guides don't have teeth. Even in BikeWalkOKC that mentions the routes selected were an initial assessment, the city does not intend to go above and beyond adding bike lanes in other locations, because BikeWalkOKC's initial assessment didn't suggest other roads. So be BOLD. Plus, other cities throughout the county and the world, are already moving fast, and we don't want to be left behind if we want to be competitive for quality of life and economic well-being.	5/12/2020 4:55 AM
22	I would also like to see additional support for sales outlets for produce grown from urban lots. If more farmers had access to land to grow more vegetables, and the ability to sell those vegetables, many jobs would be created and the community would be healthier. Paying for farmers market infrastructure and farmers market managers would benefit the entire city. Lots of vegetables can be grown on not a lot of land, creating jobs and health.	5/11/2020 8:44 PM
23	I think you did a pretty thorough job. The document is largely based on the premise that the City	5/11/2020 5:51 PM

adaptokc priorities survey responses

must continue to grow, with no limits, but just in a more environmentally-friendly way than in the past; however, that's not really sustainable, so I wish there were more about limiting urban sprawl. Also there could be more talk of what to do about the heat island--I think there have been some wonderful innovations in permeable parking surfaces, for instance. Lastly, a more thorough discussion of having a less regressive, more sustainable, and more reliable source of revenue than the sales tax would be wonderful, but I wonder if it's within the City's power to even start that conversation. Thanks for creating this, and for giving people the opportunity to comment on it! I hope you get lots of helpful feedback.

24	I would like to see native plants incorporated as much as possible in our public space landscaping. It is being done by OKC and I congratulate them. Keep it up. Developments are required by the city to provide landscape plans for the areas along roads. The plans use a point system, and developers are required to have a certain amount of points to get the landscape plan approved. I would like to see an emphasis on native plants. For example, an Oklahoma or Central Oklahoma native tree would get a higher point score than a Chinese Pistache. Switchgrass would score higher than Pampas grass. Buffalo grass would score higher than Bermuda. And Bradford Pears should result in automatic rejection of the landscape plan and banishment from the state of Oklahoma.	5/6/2020 7:58 PM
25	It is too long to read. Typical OKC Cityspeak with consultants. Good ideas don't need verbosity. Leadership is terse. No way to download a PDF for more universal reading on screens.	5/6/2020 8:29 AM
26	Long term Sustainability studies	5/1/2020 9:15 PM
27	I would like there to be more enforcement language. How will the city and concerned citizens push corporations and our neighbors to adapt to the ever-increasing risks associated with a changing climate.	4/28/2020 3:22 PM
28	I would like to see policy for city owned golf courses aligned with the Golf Course Superintendents Association of America (GCSAA) and their initiatives for Best Management Practices (BMP's). Right now these initiatives are voluntary. What's needed is policy and funding. Please contact me for my assistance.	4/28/2020 12:08 PM
29	None	4/26/2020 1:18 PM
30	Energy Efficiency - Air Sealing and Insulation should be a top priority.	4/24/2020 10:27 PM
31	looks good to me.	4/24/2020 4:16 PM
32	I would really love to see public transportation integrated into the air quality and/or natural and built environment. It's a great way to reduce pollution, make access to resources more equitable, and it's a lot cheaper than owning and maintaining a car so that's more money in our pockets that we can put back into the local economy.	4/24/2020 10:19 AM
33	N/A	4/23/2020 4:38 PM
34	Addition of the importance of transportation (light rail, streetcar) clean energy moving people	4/22/2020 12:24 PM
35	SIMPLE, Straightforward guidelines for reduction of waste and conservation.	4/22/2020 9:15 AM
